

The Student Accommodation Assistance Platform is a web-based application designed to help students find suitable, safe, and affordable housing near their institutions. Many students face challenges when searching for accommodation, including unreliable listings, lack of centralized information, and difficulty determining whether they can realistically afford a particular option.

This platform aims to simplify the process by providing a centralized space where students can browse a curated set of accommodation listings, filter options based on their preferences, and view key details such as price, location, and features. Each listing is presented in a clear and structured format to allow easy comparison.

A key feature of the platform is the affordability checker, which enables users to input their monthly budget or annual budget and instantly determine whether a specific accommodation option falls within their financial means. This adds a practical decision-making layer that is often missing from traditional listing platforms.

For this project, the platform will include a set of three to five sample accommodation listings, allowing for a focused and functional demonstration of the system's core features without overcomplicating development just yet.

Overall, the application aims to provide a more structured, transparent, and student-focused approach to accommodation searching, combining accessibility, affordability awareness, and basic safety considerations into one streamlined solution.

Objectives

To simplify the process of finding student accommodation

To provide a centralized and user-friendly listing system

To help students make financially informed decisions through an affordability feature

To introduce basic trust indicators to improve user confidence

Core Features

User registration and login

Browse and view accommodation listings (3-5 sample listings)

Search and filter functionality (price, location, etc.)

Detailed listing view

"Can I afford this?" affordability checker

Save/favourite listings

Basic listing verification indicator

Target Users

University and college students seeking accommodation
